

TITANUS PipeXpress® PLUS

Project planning software for TITANUS® aspirating smoke detectors.
For one of the highest levels of security and convenience during project planning.

Description

The intuitive, assistant-guided TITANUS PipeXpress® PLUS project planning tool is designed for the standards-compliant planning and dimensioning of piping networks for TITANUS® aspirating smoke detectors. It assists users in the optimal design, configuration, and modification of complex piping network structures, as well as in the creation of certificates of conformity ranging from simple to complex.

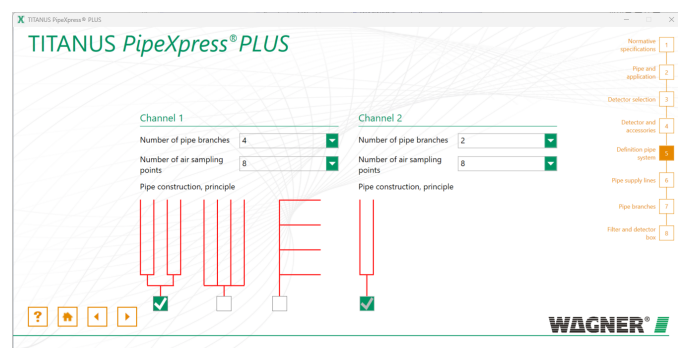

Thanks to powerful calculation algorithms and integrated plausibility checks, TITANUS PipeXpress® PLUS enables the optimization of all relevant parameters of a sampling pipe network. In addition, the software tool helps prevent errors by verifying the compatibility of the components used and checking that all requirements for the piping network are met in accordance with standards.

Features

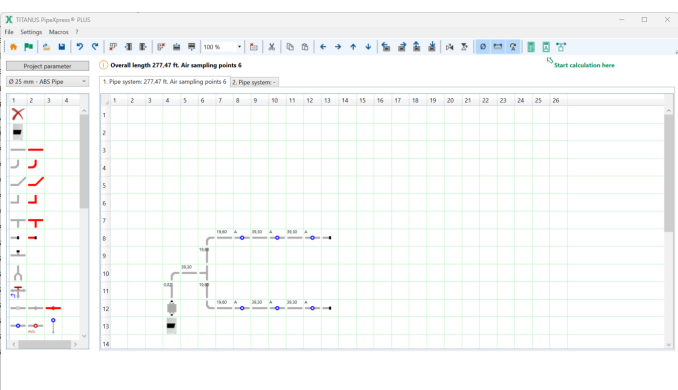

- Project planning assistant
- Pipe network editor
- Pre-assignment of parameters and values to comply with selected standards and design guidelines
- Automated detector module selection
- Calculation of optimal dimensions for all sampling points, including transport times and sensitivity
- Additional calculation functions, including for filters and air purging
- Detector settings (detector configuration)
- Automated generation of the material list
- Generation of the certificate of conformity

Specifications

System requirements

- Operating system: Microsoft Windows 10 Version 1809 (Build 17763) or later, x64
- Software platform: Microsoft .NET 8 Runtime (x64)
- CPU: at least 2 GHz; RAM: at least 4 GB
- Screen resolution: at least 1366 x 768 px
- Free memory space: at least 500 MB
- Internet connection

Compatible aspirating smoke detectors

- TITANUS REX® aspirating smoke detectors
- Other TITANUS® aspirating smoke detectors (only according to UL 268, 8th edition, and KFI)
