### **Security 2022: WAGNER presents holistic fire protection solutions with focus on fire detection and organization / hazard management**

**Langenhagen.** WAGNER, based in Langenhagen near Hanover, will be showing its holistic solutions for individual fire protection at Security 2022 in Essen from September 20 to 23. Particular focus will be on the TITANUS® aspirating smoke detection systems for early fire detection and the WinGuard system for organization/hazard management. The fire protection solution provider will be presenting its innovative technologies in the Fire/Intrusion/Systems section in Hall 7, Booth 7F28 at this year's leading trade fair for security.

TITANUS® aspirating smoke detectors form the basis of every individual, holistic fire protection solution. They detect fires at a very early stage so that appropriate countermeasures and protective measures can be initiated quickly. *"Delivery problems due to disrupted supply chains and material shortages are challenges currently facing many manufacturing companies. Thanks to forward planning and stable supplier relationships, we have been able to meet customer requests in this important fire protection segment in recent months. We are also well positioned for the future here with our partners,"* Markus Kock, Managing Director of WAGNER Deutschland GmbH, explains the current market situation. *"At our booth, we will therefore show a large selection of our aspirating smoke detection systems in various designs with a wide range of accessories. They are particularly suitable for use in warehouses/logistics, data centres, production, archives/museums, hotels and numerous others,"* adds Kock.

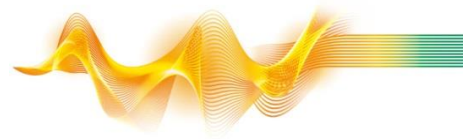

WAGNER's customers achieve a perfect organization of all safety-relevant systems with the WinGuard hazard management system. As an open software platform, all building technology, communication and security systems are integrated in a uniform user interface, independent of the manufacturer. WAGNER's fire protection experts will provide insights into the system's user interface and functionality at the trade fair.

In addition, trade fair visitors will have the opportunity to find out about WAGNER solutions for active fire prevention with the OxyReduct® oxygen reduction system and effective firefighting with the FirExting® gas extinguishing system. The VdS-certified systems minimize fire risks or fight fires early and without residues. Numerous references show how the implementation of these systems looks in practice.
